

MaSEL Outreach Program

The Materials and Systems Engineering Lab (MaSEL) at UIC has developed an outreach program to educate high-school students on some of the grand challenges of the 21st century such as

- 1) Engineer better medicines
- 2) Provide access to clean water
- 3) Make solar energy economical
- 4) Restore Earth's Climate

The outreach program consists of a weekly lecture series on various topics-

- Transition from high-school science to engineering in graduate college
- Grand challenges of the 21st century
- Various problems that chemical engineers can solve.
- Facilities and campus life
- Financial support to qualified students
- Career options after graduation

The department of Chemical Engineering at UIC provides students with the cutting-edge research opportunities, transformative education, and professional development. High-school students participating in the outreach program will get a chance to visit our department, participate in lab demonstration, meet current students and faculty members.

We will provide transportation and pizzas for your participation in the outreach activities in Chemical Engineering department at UIC.

If you are interested in the outreach program, please contact Prof. Meenesh R. Singh – mrsingh@uic.edu
